GreenScreen® Training Opportunity to Invest in Safer Chemicals

Learn how companies (like Hewlett Packard, Staples, Wal-Mart, Oatley), certification systems such as LEED, and governments (California, Washington, the European Union & the EPA) are using the GreenScreen to innovate towards safer chemicals and create market efficiency in global supply chains. Case studies will include use of the GreenScreen in advanced manufacturing as well as nanomaterials in clean energy technologies.

"HP has committed to replace restricted substances only with materials that are better for the environment and human health.... to assess alternative replacement materials we now use the GreenScreen, a hazard-based assessment framework developed by the nongovernmental organization Clean Production Action."
- HP's Global Citizens Report

"Clean Production Action has been a key driver in Walmart's path towards a sustainable future. This organization has continued to support and challenge Walmart to innovate new ways of looking at products and incorporate the GreenScreen approach of continuous improvement with our products. We applaud Clean Production Action for their commitment to sustainability and their continued work with Walmart."
- Zach Freeze, Sr. Manager – Chemicals, Walmart Stores, Inc.

A world-class team of toxicologists and engineers come to Buffalo for a day-long training on the GreenScreen for Safer Chemicals:

(Click the photos for more information)

Lauren Heine, Ph.D
Director, Clean Production Action

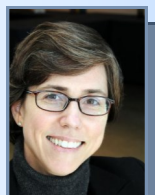

Michael Schmeida
Corporate Manager of Stewardship, Oatley

Teresa McGrath
Supervising Toxicologist, NSF International

Alex Stone, Sc.D., Senior Chemist,
Washington State Department of Ecology

Margaret Whittaker, Ph.D., Managing Director and Chief Toxicologist, ToxServices

Zach Guerette, Ph.D., Toxicologist, ToxServices

Patricia Beattie, Ph.D., D.A.B.T. – SciVera LLC, Vice President, Scientific Development

Cheri Peele, Peele Group

This introductory experiential workshop is tailored for business and academic leaders and experts in materials selection, product and process design, procurement, supply chain management, regulatory affairs, and environmental health and safety.

Wednesday, June 4, 2014 8:30 – 5:00 in Buffalo, NY
